Cool Fire Technologies moves to Aberdeen HEAT

Information technology firm Cool Fire Technologies will be moving to 1201 Technology Drive at the HEAT Center in Aberdeen effective June 1.

In conjunction with the announcement about its new location, the company is launching four revamped service plans developed specifically to reduce downtime for businesses in its service areas of Harford, Cecil and Northern Baltimore counties and New Castle County, Del. All plans include remote monitoring and testing and scheduled maintenance bundled in packages of three to 20 hours of service time per month.

"Since we started Cool Fire, we've experienced continued growth, and we knew that launching our new service plans, which are designed to save companies time and money, would accelerate that growth," said Cool Fire Technologies Chief Technology Officer Joe Krukosky.

"By moving to the HEAT Center, we will be poised to handle additional work while retaining a centrally located office."

Company CEO Liz Krukosky adds: "With more than 20 years of experience, we've seen firsthand how a proactive approach can save a business money in the long run. Both our new service plans and our new office space reflect this proactive way of doing business."

Founded in 2005, Cool Fire Technologies is a computer consulting firm that offers business technology planning, design and implementation to minimize risk, save time and money and increase productivity for business owners. The company also recently added temporary information technology staffing to its list of services. Cool Fire is a Microsoft Certified Partner and Small Business Specialist and has also earned Microsoft's Network Infrastructure Solutions Competency.
